

## Lecture 13, Feb 13, 2023

### Prototyping

- Use proxies for parts that are too complicated
  - Good for stuff that are for communication, e.g. using a water bottle as the proxy for a patient
- Don't have to build or proxy every part of the system!
- Can be a scale model
- Show a particular aspect of the concept, or integration between concepts
- Selecting elements:
  - What is the highest risk part?
  - What functions are critical?
  - How does it interface with other elements of the context and is it possible to prototype that?
